

## LANs & WANs

### About Vaioni

Since 2001 Vaioni have been delivering high performance, world class network broadband, telecoms and support services to 8000 users across the UK and Ireland. We have strategically designed and developed unique products and solutions to help businesses to success. Our portfolio of business services are delivered across our 3 datacentres, something which few competitors are able to provide at such a complex level.

Vaioni have also setup alliances with national Tier 1 carriers and peering arrangement with many ISP's. These alliances put Vaioni in a position that offers businesses, the latest technology, shortest route to the internet, lower costs and unsurpassed support on a national basis.

Taking time to design a network that meets every aspect of your network requirement needs understanding, knowledge and skill. This is a fundamental part of getting your network right and many businesses ignore a real structure to their network and add components not really appreciating if it is the best component to service a particular requirement or if a component fails what else is affected.

Vaioni will ensure a network is designed well and incorporates the correct networking equipment, located in the correct places in your network, providing optimum speeds and reliability. Vaioni base its LAN and WAN connectivity purely on Cisco which suits the SMB and Corporate market. With Cisco in place we can offer the best networking equipment, excellent support and exceptional reliability.

Vaioni are able to pre-determine whether certain network complexities will work in your environment by simulating your network in our test lab. This ensures that our proposed solution has been tried and tested before implementation.

Once a network has been designed and serves all aspects of your business and remote sites, implementation becomes a simple task as the network design and project schedule serves as an 'instruction manual' to the implementation team.

Implementation takes place with the correct engineers. Vaioni assign the correct level of expertise to each task. Microsoft Server specialists handle all aspects of server setup and installation, Cisco network specialists handle all aspects of installing and configuring the switches and routers and Linux specialists handle all aspects of setting up Linux servers and related services.
