

Vaioni launches uncontended Business + Max service, tripling upload speeds with 1:1 contention!!!

Vaioni, the leading independent, business class internet connectivity and managed security provider based in Manchester, launches its Business Class, Business + Max internet service, delivering a low-cost uncontended ADSL service with an upload speed of up-to 832kb.

Sachin Vaish, Sales Director at Vaioni says, "We have launched the Business + Max service to help SME's run mission critical applications such as VoIP and Video more effectively at lower cost. Traditionally 1:1 ADSL services only offer 256kb upload, which is always questioned by IT managers if it will ever be enough, and often the answer is no. Now businesses can get a 512kb/512kb service or a 1mb or 2mb download with an upload of 832kb with a 1:1 contention guarantee, catering for many business requirements. We are one of the only ISP's offering this type of service backed with a first class UK based support team."

There are many benefits of Business + Max apart from the Business Class service and the 1:1 contention. The service is delivered with a fully managed option and comes with a unique SLA, of 2hrs response and 2hrs fix on the router supplied. This is the de facto for all managed internet services from Vaioni, delivering a similar service to a leased line for ultimate reliability.
