

Flex

As humans we want everything for nothing, but we all like to think otherwise. When it comes to business and connectivity, there is no exception. Flex has been designed to give you everything for nothing, well not necessarily nothing but feels like good value. Many businesses don't always know how much bandwidth they will consume in the future and in fact some businesses know that there are times where they need to use a lot more bandwidth at certain times of the month or year than what they have bought. Flex gives you the flexibility to increase your bandwidth on-demand at anytime and what's more is you only pay for what you have used. We provide you with your exact requirement today using our award winning leased lines and then give you the ability to go above and beyond the allocated bandwidth you have bought anytime you require it. You can then monitor your over usage using the online graphs we provide.

Example:

1. Buy a 10mb leased line with a 2mb CDR and have the ability to flex to a full 10mb at anytime on the fly, but only pay for a 10mb with a 2mb commit.
2. Buy a 100mb leased line with a 10mb CDR and have the ability to flex to a full 100mb at anytime on the fly, but only pay for a 100mb with a 10mb commit.
3. Buy a 1000mb leased line with a 100mb CDR and have the ability to flex to a full 1000mb at anytime on the fly, but only pay for a 1000mb with a 100mb commit.

Feature Spotlight

- Flex your speed when you want
- Delivered using Ethernet, Layer2 through Vaioni's NGN
- Nationwide availability
- Fully managed with a 99.96% SLA and 4hr guaranteed fix
- Pay for what you use over your minimum commit level
